

CHMER is No. 1 EDM Brand in Taiwan

By Wu Chang-ching

Ching Hung's AMS AW5x High Precision Wire Cutter and CHMER EA425L 3-in-one.

Ching Hung Machinery & Electric Industrial Co., Ltd., Taiwan's top brand for electric discharge machines (EDMs), is actively demonstrating the innovation prowess of the MIT (Made-in-Taiwan) products by showing its latest developments of wire cut EDMs and deep sinker EDMs at the EMO Milano 2015.

As Taiwan's first company that has successfully developed CNC-controlled EDM on its own, CHMER has been

actively incorporating the concepts of "Industry 4.0," "smart production," and "smart plant" into its production lines, aiming to smartize its products and create better production management efficiency.

General manager Chen Hung notes that the company's products come in four major categories including wire cutters, EDMs, deep sinker EDMs, and high speed milling machines, with all its products adopting linear motors and smart controllers developed by the company own its own to satisfy

customers' demand for high-precision machining on molds and metal parts. The firm's products are now marketed in the world under two brand names, CHMER and AMS, to effectively boost the visibility of MIT brands in the world.

This year, the company also exhibits AMS AW5X high precision wide cutter and HMER EA425L 3-in-one wire cutter that have been well received by European auto makers.
